

Namibia (North West Region)

2004 Fact Sheet

The **2004 Namibia (North West Region) GSHS** measured alcohol and other drug use; sexual behaviors that contribute to HIV infection, other STI, and unintended pregnancy; unintentional injuries and violence; hygiene; physical activity; tobacco use; mental health; and protective factors.

The 2004 Namibia (North West Region) GSHS was a school-based survey of students in grades 6, 7, 8, 9, and 10. A two-stage cluster sample design was used to produce data representative of all students in grades 6, 7, 8, 9, and 10 in Namibia (North West Region). At the first stage, schools were selected with probability proportional to enrollment size. At the second stage, classes were randomly selected and all students in selected classes were eligible to participate. The school response rate was 92%, the student response rate was 88%, and the overall response rate was 81%. A total of 1,421 students participated in the Namibia (North West Region) GSHS. Students self-reported their responses to each question on a computer scannable answer sheet. For comparison purposes, only students aged 13-15 years are included in the analyses for this fact sheet.
